

O Series Outdoor Speakers

Big Sound – Small Profile

All-Weather Construction

Many Options

Deep bass, warm mids and accurate highs. O Series Outdoor Speakers deliver big, indoor-quality sound in a small footprint that can be mounted almost anywhere.

Designed to withstand even the most extreme weather conditions, O Series Outdoor Speakers will provide years of outdoor (and indoor!) listening pleasure.

With five great-sounding, all-weather models to choose from, there's an O Series Outdoor Speaker to suit every application and budget.

Take Your Music Outdoors

From the patio to the pool, on a boat or even inside on a bookshelf, ELAN O Series Outdoor Speakers deliver the sound you want, anywhere you want it. Their unique acoustic design delivers a deep, clean bass that beautifully compliments the accurate highs and warm mids – making them ideal for all types of music at any volume. Their all-weather cabinet

design makes them the ideal speaker for just about any environment.

All models come with custom “C” brackets that can be mounted horizontally or vertically onto walls or under eaves and swivel up to 180° so that you can direct the sound where you want it to go. The brackets, grills and cabinets are even paintable, allowing you to customize them to match your home.

O Series Outdoor Speakers are available in two grades in five different models.

OM Series Speakers

Incorporating design features usually found only on indoor speakers costing considerably

more, the award-winning OM Series boasts Mica-filled composite woofers for fast, clean and deep bass response, oversized magnets for better power handling, vented-pole driver mounting for increased dispersion, and Custom Q crossovers. Just listen and you'll know why OM speakers are a cut above the rest.

OE Series Speakers

Ideal for smaller or less-used outdoor areas, the OE Series offers quality sound and premium construction at a great price. OE speakers use the same cabinet design as the OM Series – bass reflex box tuning that increases bass response while maintaining a small enclosure size. Composite polypropylene /carbon woofers and silk diaphragm tweeters deliver the smooth and accurate sound needed for outdoor listening environments.
